

California Dental Group Announces Saving Smiles Program - an Initiative Dedicated to Providing Dental Services to Those Who Experience Barriers to Care

The purpose of California Dental Group's Saving Smiles program is to give back to the community, promote access to affordable healthcare and provide pro bono dental services to low-income individuals who have previously been denied access.

Orange, CA, September 24, 2016 --(PR.com)-- In an effort to improve the lives of those without access to affordable dental care, California Dental Group announces the Saving Smiles Program. The goal of the program is to generate awareness to the issue that unfortunately many do not have access to the dental health care that they desperately need and deserve .

Orange County, CA dentist Dr. Jahani recently donated his time and skills to provide pro bono dental work to patient Robert Kearns, a caregiver who has selflessly dedicated his life to helping the disabled. Robert who had previously been denied access would have gone without proper dental care had it not been for Dr. Jahani and the Saving Smiles program.

"Patient has lost teeth in the back, multiple cavities, broken teeth, decalcification on the back of the teeth, as well as gum disease that is inflammation and infection around the gums," says Dr. Jahani .

The highly trained and experienced Orange County dentist specializes in preventative and cosmetic dentistry procedures including teeth whitening, porcelain veneers and crowns. He is a USC dental school graduate, bilingual in English and Farsi his focus is on building trusting relationships with patients through honest and open communication.

Dr. Jahani is an active member of numerous professional organizations including the American Dental Association, California Dental Association and Los Angeles Dental Society.

The team of highly qualified dental care providers at each of the 7 office locations encourage residents of the Orange, Anaheim, Brea and Riverside California areas to learn how their dental health, as well as their overall health, can be improved with proper preventative dental care diagnosis and treatment.
